
VIRGINIA CORN HYBRID AND MANAGEMENT TRIALS IN 2011

Coordinators of Virginia Corn Hybrid Trials in 2011

Wade Thomason, Extension Specialist, Department of Crop and Soil Environmental Sciences, Virginia Tech
Harry Behl, Research Specialist Senior, Department of Crop and Soil Environmental Sciences, Virginia Tech
Elizabeth Hokanson, Research Associate, Department of Crop and Soil Environmental Sciences, Virginia Tech

Other contributors:

Bobby Ashburn, Agricultural Manager Senior, Tidewater Agricultural Research and Extension Center
Bruce Beahm, Foundation Seed Manager, Virginia Crop Improvement Association Foundation Seed Farm
Steve Gulick, Research Specialist, Northern Piedmont Agricultural Research and Extension Center
Alvin Hood, Agricultural Specialist, Piedmont Agricultural Research and Extension Center
Ned Jones, Farm Manager, Southern Piedmont Agricultural Research and Extension Center
Matt Yancey, Extension Agent, Rockbridge County
Jon Wooge, Agricultural Program Coordinator, College Farm, Virginia Tech

Background Information

Performance trials of commercial corn hybrids were conducted at six locations in Virginia in 2011. The Mt. Holly location consisted of both an irrigated and non-irrigated test. All locations except Orange were planted with a Wintersteiger PlotKing 2600. Orange was hand-planted. All locations except Orange were harvested with a Massey-Ferguson 8XP plot combine. Half of the plots at Orange were harvested with the combine; the other half were hand-harvested. The Shenandoah Valley site was abandoned due to an accidental spraying with glyphosate. Yields have been adjusted to 15.5% moisture. Grain test weight, moisture, and plot grain weights were measured with a GrainGauge® manufactured by HarvestMaster. A list of the companies participating in the trials is shown in the above table. All hybrids entered in the Virginia trials were those submitted by commercial companies. The locations at which particular hybrids were entered were specified by the company. Companies entering hybrids were charged a fee for each hybrid per location to support the Virginia Corn Hybrid and Management Trials.

Yield Differences

Experimental plots vary in yield and other measurements due to location in the field and other factors which cannot be controlled. Statistics given in the tables are intended to help the reader make valid comparisons between hybrids. The magnitude of differences which may have been due to uncontrollable variation has been computed for the data and listed at the bottom of columns as the LSD (.05) (least significant difference with 95% confidence). Differences less than the LSD are assumed not to be real differences with 95% confidence.

Understanding Relative Yield

Companies entering hybrids decide which hybrids are planted at which locations. Combining and comparing absolute yield and other results from multiple sites is inappropriate when not all hybrids are planted at all locations. For example, one hybrid might have an unfair advantage in such a comparison because it was tested only at sites with ideal growing conditions. Another hybrid tested at sites with less-than-ideal

growing conditions would have yields that tended to be lower. In this example, it would be difficult to determine whether yield differences were because of differences in genetic yield potential or simply because of differences in the environmental conditions under which they were tested. The solution is to compare hybrids based on relative yields rather than absolute yields.

To calculate relative yield, the yield for each hybrid at each site is divided by the average yield for all hybrids tested at that same site and multiplied by 100. Once each hybrid at each site has been assigned a relative yield, comparisons can be made between hybrids tested at the same site or different sites. For hybrids tested at multiple sites, we can also calculate a multi-site relative yield average.

Relative yields of 100 indicate hybrids that were average performers. Relative yields greater than 100 indicate yields above-average. Relative yields less than 100 indicate yields below-average. The magnitude of the relative yield numbers indicate how far above or below average a hybrid performed. For example, a hybrid with a relative yield of 110 yielded 10% of above the average yield for all hybrids at that site.

Choice of Hybrids

When making hybrid selections it is important to realize that hybrids differ in their performance in different environments. Some hybrids are more adapted to a wide range of environments. Hybrid performance may vary with year and location variations in rainfall, temperature, pests and other environmental variables. In these experiments, many hybrids have essentially the same yield, and great care should be taken in interpreting the results of a single year's tests, especially at only one location. For these reasons it is important, whenever possible, to also look at a hybrid's average across locations when making hybrid selections. Multi-year averages give even greater confidence to hybrid performance decisions. The relative yield tables compare the yield of a hybrid to the average yield of all hybrids in the test. These tables are an excellent summary of yield potential compared to other hybrids.

2011 Virginia Corn Hybrid Plot Information

(Rates are on a per acre basis.)

Blackburg Whitethorne Farm

Planted: May 31, 2011
Harvested: October 21, 2011
Pesticide: 1 qt atrazine + 2 qt Gly-4 Plus® + 1 oz Python® + 1 qt Princep® + 2 qt Bicep® April 21, 2011 pre-plant incorporated; 5 lb Force 3G® at planting; 0.75 qt atrazine + 3 oz Laudis® + MSO oil 1% + 1.5 qt UAN June 30, 2011.
Fertilizer: 30-60-60 pre-plant incorporated May 2, 2011; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 50 lb N using UAN June 29, 2011.
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: Hayter
Cooperator: Jon Wooge

Blackstone Southern Piedmont Agricultural Research & Extension Center

Planted: April 18, 2011
Harvested: August 31, 2011
Pesticide: 5 lb Force 3G® at planting; 1.5 pt Dual II Magnum® + 4 qt atrazine 4L April 19, 2011.
Fertilizer: 1000 lb 10-10-10 pre-plant incorporated April 14, 2011; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 80 lb N top-dressed using 34-0-0 May 19, 2011.
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: Durham Sandy Loam
Cooperator: Ned Jones

Holland Tidewater Agricultural Research & Extension Center

Planted: April 19, 2011
Harvested: August 23-24, 2011
Pesticide: 2 qt Bicep II® pre-plant incorporated; 5 lb Force 3G® at planting.
Fertilizer: 1000 lb lime February 23, 2011; 300 lb 8-15-36 March 23, 2011; 60 units N using 24-0-0-3 April 18, 2011, 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 315 lb 38-0-0 June 6, 2011.
Irrigation: 1.3" June 22 1.3" June 23
Plot Size: 2 rows 35' x 30" 4 replications
Soil Type: Nansemond and Eunola
Cooperator: Bobby Ashburn

Mt Holly (dryland no-till site) Virginia Crop Improvement Association Foundation Seed Farm

Planted: April 23, 2011
Harvested: September 30, 2011
Pesticide: 5.5 pt Lumax® + 1.5 pt atrazine + 1.5 pt Princep® pre-plant incorporated + 5 lb Force 3G® at planting.
Fertilizer: 60-30-60 pre-plant incorporated; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 80 lb N + 10 lb S side-dressed May 24, 2011.

Plot Size: 2 rows 25' x 30" 4 replications

Soil Type: State fine sandy loam
Cooperator: Bruce Beahm

Mt Holly (irrigated site) Virginia Crop Improvement Association Foundation Seed Farm

Planted: April 21-22, 2011
Harvested: September 20 – October 5, 2011
Pesticide: 5.5 pt Lumax® + 1.5 pt atrazine + 1.5 pt Princep® pre-plant incorporated + 5 lb Force 3G® at planting.
Fertilizer: 60-50-120 pre-plant incorporated; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 90 lb N + 11 lb S fertigated June 2, 2011; 60 lb N + 8 lb S fertigated June 21, 2011.
Irrigation: 0.2" June 2 1.0" June 26
 0.5" June 3 1.0" July 9
 1.0" June 7 1.0" July 15
 1.0" June 13 1.0" July 27
 0.7" June 17 0.7" August 9
 0.2" June 21

Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: State fine sandy loam
Cooperator: Bruce Beahm

Orange Northern Piedmont Agricultural Research & Extension Center

Planted: May 12 - 25, 2011
Harvested: October 26 - November 2, 2011
Pesticide: 3 qt Lumax® + 1 qt atrazine pre-plant incorporated May 2, 2011.
Fertilizer: 100-52-0 pre-plant incorporated May 2, 2011; 100 lb N side-dressed June 8, 2011.
Plot Size: 1 row 30' x 30" 4 replications
Soil Type: Davidson silty clay loam
Cooperators: Steve Gulick and Alvin Hood

Shenandoah Valley (Lynnwood - Thanks to Monte and Gerald Heatwole at Cub Run Dairy)

Planted: May 6, 2011
Harvested: abandoned after accidental spraying with glyphosate
Pesticide: Burndown of rye cover with 2.5 qt gramoxone April 28, 2011; 5 lb Force 3G® at planting; 1.5 qt Aatrex® (atrazine) + 1.5 qt Princep® + 5.8 oz Asana® with fertilizer May 11, 2011; 1.5 qt Prowl® + 0.5 oz Profine (generic Permit) + 1.25 qt Touchdown Total® (glyphosate).
Fertilizer: Preplant broadcast 4 tons dairy heifer bed pack 55-91-27; 17 gal 20-10-0-2.2S-.127B-.25Zn at planting; 50 lb K + 20 lb S + chemicals May 11, 2011; 0.5 lb B + chemicals June 8, 2011.
Plot Size: 2 rows 25' x 30" 4 replications
Soil Type: Allegheny fine sandy loam
Cooperators: Matt Yancey and Monte Heatwole

* Relative yield is calculated by dividing the yield of a hybrid by the average yield of all hybrids of all maturities at that location. A hybrid with a relative yield of 105 was 5% above the average of all hybrids at that location. The value of 105 is not a yield but a value relative to all other yield values at that location. Relative yields are listed in order of descending mean values.

¹ Days to maturity provided by company; differences in maturity rating methods may exist between companies.

¹ Days to maturity provided by company; differences in maturity rating methods may exist between companies.

² Reported at 15.5% moisture.

Planted April 21-22, 2011. Harvested September 20 - October 5, 2011.

Population was 28,083 plants/acre.

There was a great degree of hurricane damage to these plots and that contributed to the high variability of data.
